TMP47C443NG (Note 3)				8	1	8	1	Yes		Yes	Yes	Yes	23	TMP47P443VNG	SDIP28							

Note 1) When CR oscillation is used (2.2 V to 5.5 V at 2.5 MHz)

Note 2) Minimum instruction execution times (1) and (2) correspond to power supply voltages (1) and (2).

Note 3) Contains the CPU core for the 470 Series.

Note 4) The minimum instruction execution time in Low-Speed mode is 244 μs (at 32.768 kHz).

- Not recommended for automotive applications.
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

8-Bit Microcontrollers

TLCS-870 Family: TLCS-870/C Series

Note 1) Configurable as UART or SIO.

Note 2) Minimum instruction execution times (1) and (3) correspond to power supply voltages (1) and (3).

Note 3) Up to 960 LCD segments (60 seg. x 16 com.)

Note 4) Configurable as I²C or UART.

Note 5) The minimum instruction execution time in Low-Speed mode is 122 μs (at 32.768 kHz).

- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

TMP89FS60UG	(3) 0.238	8						1	2	1	16			2		4				Yes	Yes	Yes	Yes	Yes	Yes	Yes	58	(3) 2.7 to 3.0	(1) -40 to 85 (2) -40 to 85 (3) -20 to 85	LQFP64 (10×10 mm)		

Note 1) Configurable as UART or SIO. Also, selectable from I²C and SIO.

One SIO channel can be used simultaneously. As for the TMP89FS60, up to two SIO channels can be used simultaneously.

Note 2) The on-chip debug unit is available with the flash versions, but not with the mask ROM versions.

Note 3) Minimum instruction execution times (1) and (3) correspond to power supply voltages (1) and (3).

Note 4) The minimum instruction execution time in Low-Speed mode is 122 μs (at 32.768 kHz).

Note 5) The erase/program power supply voltage is 3.0 to 3.6 V.

Note 6) Two ports are reserved for high-speed oscillator pins and can not be used as I/O ports.

Note 7) The AD conversion accuracy differs between the flash and mask ROM versions. For details, see the datasheet.

• Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

Note 1) Configurable as UART or SIO.

Note 2) Also contains an OTP memory.

Note 3) Minimum instruction execution times (1) to (4) correspond to power supply voltages (1) to (4).

Note 4) Configurable as I²C or UART.

Note 5) The minimum instruction execution time in Low-Speed mode is 122 μs (at 32.768 kHz).

• Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

Note 1) Either ƒC bus or SIO module can be selected by software.

Note 2) A 125°C version is available for the TMP87C408DM. For further information, please contact your nearest Toshiba sales representative.

Note 3) Minimum instruction execution times (1) and (2) correspond to power supply voltages (1) and (2).

Note 4) The minimum instruction execution time in Low-Speed mode is 122 μs (at 32.768 kHz).

- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

TLCS-870 Family: TLCS-870 Series

8-Bit Microcontrollers for Automotive

TLCS-870 Family: TLCS-870/C Series

□Flash Versions

Part Number	ROM (Kbytes)	RAM (Bytes)	Minimum Instruction Execution Times (μs) (Note 1)	LED Driver (Ch)	CAN (Ch)	SEI (Ch)	SIO (Ch)	UART (Ch)	UART/I ² C (Ch) (Note 3)	I ² C (Ch)	8-Bit AD Converter (Ch)	10-Bit AD Converter (Ch)	18-Bit Timer/Counter (Ch)	16-Bit Timer/Counter (Ch)	8-Bit Timer/Counter (Ch)	Watchdog Timer	Dual Clocks (Low-Speed Mode (Note 2))	I/O Port (Pins)	Power Supply Voltage (V)	Operating Temperature (°C)	Mask ROM Version (See the datasheet for operating conditions.)	Package
TMP86FH92IDMG (Note 4)	16	512	(1) 0.25 (2) 0.4	8	1	1	1	1			6		1	2	Yes	Yes	24	(1) 4.0 to 5.5 (2) 3.0 to 5.5	-40 to 85	TMP86CH92IDMG (Note 4) TMP86CH92SDMG (Note 4)**	SSOP30	
TMP86FS49AIFG	60	2048	(1) 0.25 (2) 0.5	13		2	2	1		16		2	4	Yes	Yes	56	(1) 4.5 to 5.5 (2) 3.0 to 5.5			—	QFP64 (14×14 mm)	
TMP86FS49AIUG				13		2	2	1		16	2	4	Yes	Yes	56	LOFP64 (10×10 mm)						

Note 1) Minimum instruction execution times (1) and (2) correspond to power supply voltages (1) and (2).

Note 2) The minimum instruction execution time in Low-Speed mode is 122 μs (at 32.768 kHz).

Note 3) Configurable as I²C or UART.

Note 4) Reliability testing includes AEC-Q100-Rev-F (July 18, 2003) in addition to Toshiba's standard tests (automotive grade).

- For further information about the V_R/S/T grade levels, please contact your nearest Toshiba sales representative.
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

** : Under development

TLCS-870 Family: TLCS-870/C1 Series

□Flash Versions

Part Number	ROM (Kbytes)	RAM (Bytes)	Minimum Instruction Execution Times (μs)	LED Driver (Ch)	VFT Driver (Ch)	SEI (Ch)	SIO (Ch)	UART (Ch)	UART/SIO (Ch) (Note 1)	SEI/UART (Ch) (Note 3)	I ² C/SIO (Ch) (Note 2)	8-Bit AD Converter (Ch)	10-Bit AD Converter (Ch)	8-Bit DA Converter (Ch)	18-Bit Timer/Counter (Ch)	16-Bit Timer/Counter (Ch)	10-Bit Timer/Counter (Ch)	8-Bit Timer/Counter (Ch)	Multiply-Accumulate (MAC)	Motor Controller (Ch) (Note 5)	Program Patch Logic	Watchdog Timer	Dual Clocks (Low-Speed Mode (Note 4))	Clock Gear	Power-On Reset	Undervoltage Detection	On-Chip Debug Unit	I/O Port (Pins)	Power Supply Voltage (V)	Operating Temperature (°C)	Mask ROM Version (See the datasheet for operating conditions.) Note 1) Configurable as SIO or UART.

Note 2) Configurable as I²C or SIO. Up to two SIO channels can be used simultaneously.

Note 3) Configurable as SEI or UART.

Note 4) The minimum instruction execution time in Low-Speed mode is 122 μs (at 32.768 kHz).

Note 5) The motor controller can only be used when an 8-MHz oscillator is used with the clock gear set to 1x.

- For further information about the V_R/S/T grade levels, please contact your nearest Toshiba sales representative.
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

** : Under development

TLCS-870 Family: TLCS-870/C Series

Note) The TMP910CRAXBG uses these five power supplies:

- (1) External memory, external logic, external A/D converter 3.0 V to 3.6 V
- (2) External USB 3.15 V to 3.45 V
- (3) External memory 1.7 V to 1.9 V/3.0 V to 3.6 V
- (4) External CMOS image sensor, external I²S, external LCD 1.8 V to 3.6 V
- (5) Internal logic 1.4 V to 1.6 V

- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

- The TLCS-47 family software runs on the Japanese or English Windows® 95, Windows NT® 4.0, DOS-compatible box and MS-DOS®. Microsoft®, Windows®, Windows NT® and MS-DOS® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
 - One QFP adapter and one pin protector are supplied with an MCU probe or a package converter whose name begins with "PN12." When you purchase additional QFP adaptors or pin protectors, check their part numbers in the section "Spare Parts from Toshiba."
 - For the supported Programming tools, see the section "Programming Tools."
 - Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.
- ##: Contact your local Toshiba sales representative before ordering products.
- *1: One IC socket is supplied with each MCU probe. IC sockets are Yamaichi Electronics' products.
- *2: One IC socket is supplied with each package converter. IC sockets are Yamaichi Electronics' products.
- *3: The package converters whose part numbers begin with AS are Emulation Technology's products.
AS-DIP.3-016-SO03-1: DIP16 → SOP16 AS-DIP.6-028-SO08-1: DIP28 → SOP28
AS-DIP.3-020-SO03-1: DIP20 → SOP20 AS-SDP.4-028-SO05-2: SDIP28 → SOP28
- *4: These are spare parts. One spare part is supplied with each emulator or emulation pod.
- *5: BM1020A: RTE controller, BM1022R0B: model 10 controller

TLCS-870/C Series (1/4)

□ Software Products

Toshiba Integrated Development Environment	
Integrated Development Environment *1	
C Compiler	SW00MNO-ZCC: 1 license SW00MNI3-ZCC: 10 licenses

- Choose either the RTE870/C model 15 In-Circuit Emulation system or the RTE870/C Light In-Circuit Emulation system.
- TLCS-870/C Series software products run on the Japanese or English Windows® 2000 and Windows® XP.
- Microsoft®, Windows®, Windows NT® and MS-DOS® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- For the supported Programming tools, see the section "Programming Tools".
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

- *1: The controller and Light In-Circuit Emulator comes with a single-seat download license for the Integrated Development Environment.
- *2: The emulation chip is specifically designed for each target MCU. For availability status, contact your local Toshiba sales representative.
- *3: One OFP adaptor and one pin protector are supplied with each OFP packaged product.
- *4: These are ADLINKS's products.
- *5: One IC socket is supplied with each target connection board. IC sockets are Yamaha Electronics' products.

- Choose either the RTE870/C model 15 In-Circuit Emulation system or the RTE870/C Light In-Circuit Emulation system.
 - TLCS-870/C Series software products run on the Japanese or English Windows® 2000 and Windows® XP.
 - Microsoft®, Windows®, Windows NT® and MS-DOS® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
 - For the supported Programming tools, see the section "Programming Tools".
 - Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.
- *1: The controller and Light In-Circuit Emulator comes with a single-seat download license for the Integrated Development Environment.
 *2: The emulation chip is specifically designed for each target MCU. For availability status, contact your local Toshiba sales representative.
 *3: One O/P adaptor and one pin protector are supplied with each O/P packaged product.
 When you purchase additional O/P adaptors or pin protectors, check their part numbers in the section "Spare Parts from Toshiba".
 *4: These are ADLINKS's products.
 *5: These are top covers for IC packages. These are Tokyo Eletech's products.

- The TLCS-870 Series software products run in the following environments:

C/C-Like Compiler & Assembler Set: Japanese or English Windows® 98 and Windows NT® 4.0

Debugger: Japanese or English Windows® 2000 and Windows® XP

Microsoft®, Windows®, Windows NT® and MS-DOS® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

- One QFP adapter and one pin protector are supplied with an MCU probe or a package converter whose name begins with "PN12".

When you purchase additional QFP adaptors or pin protectors, check their part numbers in the section "Spare Parts from Toshiba."

- For the supported Programming tools, see the section "Programming Tools".
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

##: Contact your local Toshiba sales representative before ordering products.

*1: These are spare parts. One spare part is supplied with each emulation pod.

*2: The package converters (DIP28 → SOP28) whose part numbers begin with AS are Emulation Technology's products.

*3: One IC socket is supplied with the package converter. The IC socket is Yamaichi Electronics' product.

*1: These are spare parts. One spare part is supplied with each emulation pod.

*2: BM1040R0A: model 15 controller, BM1055R0C: model 25 controller

- For connection with the host system via RS-232C:
 - the BM1055R0C requires a 9-pin cross cable;
 - the BM1055R0B and BM1055R0A (old version) require a 25-pin straight cable;
 - the BM1040R0A requires a 25-pin straight cable.

- For connection with the emulation pod, the BM1055R0A, the old version of the controller, requires the PN300001.

*3: One IC socket is supplied with each MCU probe. IC sockets are Yamaichi Electronics' product.

*4: One IC socket is supplied with the package converter. The IC socket is Yamaichi Electronics' product.

 - the BM1055R0B and BM1055R0A (old version) require a 25-pin straight cable;
 - the BM1040R0A requires a 25-pin straight cable.
- For connection with the emulation pod, the BM1055R0A, the old version of the controller, requires the PN300001.

● Choose either the On-Chip Debug Emulator or the In-Circuit Emulator.

● The TLCS-870/C1 Series software products run on the Japanese or English Windows® 2000 and Windows® XP.

Microsoft®, Windows®, Windows NT® and MS-DOS® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

● For the supported Programming tools, see the section "Programming Tools".

● Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

*1: The emulator comes with a single-seat download license for the Integrated Development Environment.

*2: One connector is supplied with each On-Chip Debug Emulator.

*3: The emulation chip is specifically designed for each target MCU. For availability status, contact your local Toshiba sales representative.

*4: These are ADLINKS's products.

- The TLCS-900 Family software products run on the Japanese or English Windows® 2000 and Windows® XP. Microsoft®, Windows®, Windows NT® and MS-DOS® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- The real-time OS requires a license agreement. For details, please contact your local Toshiba sales representative.
- One QFP adapter and one pin protector are supplied with an MCU probe or a package converter whose name begins with "PN12." When you purchase additional QFP adaptors or pin protectors, check their part numbers in the section "Spare Parts from Toshiba."
- For the supported Programming tools, see the section "Programming Tools".
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

*1: The controller comes with a single-seat download license for the Integrated Development Environment (excluding the BM1056R0B).

*2: BM1040R0A: model 15 controller, BM1055R0C: model 25 controller, BM1056R0B: model 25/2 controller

- For connection with the host system via RS-232C:

- the BM1055R0C requires a 9-pin cross cable;
- the BM1055R0B and BM1055R0A (old version) require a 25-pin straight cable;
- the BM1040R0A requires a 25-pin straight cable.

- The previous version of the controller requires a dedicated cable shown below. For details, contact your local Toshiba sales representative.

BM1055R0A: The PN300001 is required. The BM1055R0A cannot be used for an MCU whose name begins with "TMP92".

To perform a performance analysis and a coverage measurement using the BM1055R0B with an MCU whose name begins with "TMP92", the PN300007 is required.

*3: The model 25 and model 15 emulation pods can use the same accessories.

*4: These are spare parts. One spare part is supplied with each emulation pod.

*5: To operate the TMP91CU10FG at 2 V on the target board, a 2-V conversion adaptor (PN410001) is required. For information about the 2-V conversion adaptor, contact your local Toshiba sales representative.

*6: 2-V operation is not supported.

*7: These are Tokyo Eletech's products.

*8: These are top covers for IC packages. These are Tokyo Eletech's products.

*9: In addition to the BM91CW60F0A-M15, the BM91FW64F0A-GM being developed will also be supported.

*10: The BM91FW64F0A-GM are also supported for the following MCUs: TMP91CW60FG, TMP91CW60DFG, TMP91FU62FG, TMP91FU62DFG.

- For the supported Programming tools, see the section "Programming Tools".
- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.
- ##: Contact your local Toshiba sales representative before ordering products.
- *1: The controller comes with a single-seat download license for the Integrated Development Environment (excluding the BM1056R0B).
- *2: BM1040R0A: model 15 controller, BM1055R0C: model 25 controller, BM1056R0B: model 25/2 controller
 - For connection with the host system via RS-232C:
 - the BM1055R0C requires a 9-pin cross cable;
 - the BM1055R0B and BM1055R0A (old version) require a 25-pin straight cable;
 - the BM1040R0A requires a 25-pin straight cable.
 - The previous version of the controller requires a dedicated cable shown below. For details, contact your local Toshiba sales representative.
 - BM1055R0A: The PN300001 is required. The BM1055R0A cannot be used for an MCU whose name begins with "TMP92".
 - To perform a performance analysis and a coverage measurement using the BM1055R0B with an MCU whose name begins with "TMP92", the PN300007 is required.
- *3: The model 25 and model 15 emulation pods can use the same accessories.
- *4: These are spare parts. One spare part is supplied with each emulation pod.
- *5: To connect the BM96C031F0A to the controller (BM1055R0C), a dedicated adaptor is required. For details, please contact your local Toshiba sales representative.

TX49 Family

□Hardware Products

Reference Board	Target MPU	Functions
	Part Number	
RBTX4951	TMPR4951BFG-200	These are reference boards for evaluating the TMPR4951 and TMPR 4955 respectively. Since both the TMPR4951 and TMPR 4955 have the SysAD Bus interface, the same board can be used for evaluation; the RBTX4951 and RBTX4955 simply come with different CPUs.
	RBHMA4601(CE)	
RBTX4955	TMPR4955CFG-400	These reference boards have a system controller (SysAD bridge), a NOR flash ROM, a DIMM DRAM, an SIO, an Ethernet controller, an I/O controller, and an EEPROM and an RTC connected to the SPI. Also, the reference boards provide an EJTAG connector, a ROM emulator connector and an expansion connector.
	RBHMA4605(CE)	
RBTX4925	TMPR4925XBG-200	This is a PCI-card-compliant reference board for evaluating the TMPR4925. This board has a CPU, a flash ROM, an SDRAM, a PCI controller, an Ethernet controller, an SIO interface, and PCMCIA and SmartMedia™ card slots. It also provides an expansion connector.
	RBHMA4300(CE)	
RBTX4937	TMPR4937XBG-300/333	This is a PCI-card-compliant reference board for evaluating the TMPR4937. This board has a CPU, a flash ROM, an SDRAM, an Ethernet controller and an SIO interface. It also provides a connector that can be connected to an external AC'97 board.
	RBHMA4400(CE)	
RBTX4938	TMPR4938XBG-300/333	This is a PCI-card-compliant reference board for evaluating the TMPR4938. This board has a CPU, a 128-MB SO-DIMM DRAM, a 16-MB NOR flash ROM, a detachable 32-MB NAND flash ROM and a PCI controller. On-chip features include an Ethernet controller, a debug Ethernet, an SIO, an ATA (IDE), an AC-Link interface, and an EEPROM and an RTC connected to the SPI. It also provides an expansion connector.
	RBHMA4500(CE)	
RBTX4939	TX4939XBG-400	This is an ATX-compliant reference board for evaluating the TX4939. It mainly consists of two modules: an independent CPU module having a DDR-SDRAM and an EJTAG interface, and a BASE board with a CPU module that allows the on-chip PCI, ATA, Ethernet MAC (RMI) and Video/Audio to be evaluated.
	RBHMS4700(CE)	
RBTC86C1	TC86C001FG(GOKU-S)	This is a reference board is compliant with the PCI card edge specification (3.3 V, 33-MHz, 32-bit) and is used to evaluate the TC86C001FG. It has a connector to which the ATA/ATAPI, two USB 1.1 host channels, a USB 1.1 device, I ² C and SIO channels can be attached.
	RBHPE4300(CE)	
RBHBK4400	—	This is a backplane board that can be used for system evaluation in conjunction with a PCI-compliant referenced board. It consists of a PCI-card-type CPU board and four PCI bard slots. A commercially-available ATX-compliant power supply may be used.
	RBHBK4400(CE)

● Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

++: Being planned

*1: As a guideline, the adapter should be replaced after 2,000 writes.

⊙: Supported

*2: Off-board Programming: Programs a Flash microcontroller before it is mounted on the target board.

*3: On-board Programming: Programs a Flash microcontroller while it is mounted on the target board.

*4: Comes with a download license for control software.

Accessory Tools

Expendable and optional hardware items for the development system are collectively referred to as accessory tools.

- MCU probe
- Probe set
- QFP adaptor
- Pin protector
- Package converter
- MCU mount adaptors
- Communication cable
- Connector

- ◆ To provide versatility, the footprint pattern of the QFP adaptor leads is slightly different from that of an MCU. If there is a need to install both the QFP adaptor and the MCU with an identical footprint, the board must be designed to be compatible with both of them.
- ◆ Before beginning a board design or purchasing these accessory tools, be sure to check the latest product specification, recommended footprints, etc. with each manufacturer.
- ◆ Other than those listed below, accessory tools that can be used together with the Toshiba products are available from Tokyo Eletech Corporation. Please visit Tokyo Eletech Corporation's website for more details.

Spare Parts from Toshiba

The TLC-870/C model 15 target connection boards, MCU probes and package converters whose part numbers begin with "PN12" come with a QFP adaptor and a pin protector. When you purchase additional QFP adaptors or pin protectors, check their part numbers in the following Spare Parts table.

For information about spare parts for third-party accessory tools, please contact the manufacturer or distributor of each product.

- ◆ Note that if you are using a package converter, use spare parts for package converters, not those for MCU probes.
- ◆ QFP adaptors and pin protectors are available from Tokyo Eletech and Toshiba.

Target Connection Board Spare Parts

Part Number	Target MCU Package	Spare Part			
		QFP Adaptor *1		Pin Protector *2	
		Toshiba *3	Tokyo Eletech (IC Connector)	Toshiba	Tokyo Eletech (IC Connector Protection Socket)
BMP86D044DE0A	LOFP44 (10 x 10)	PN210019	TOPACK044SA	PN210021	TOSOCKET044SAG

BMP86D100FF0A	QFP100 (14 x 20)	PN210004	TQPACK100RB	PN210006	TQSOCKET100RBG

*1: QFP adaptors and IC connectors are soldered onto the pc board of the target system. Once soldered, they should not be unsoldered from the pc board and resoldered.

*2: Pin protectors are sockets used to protect the target connection boards for QFPs and the pins of QFP adaptors and IC connectors. Be sure to use a pin protector to protect the portion where the target connection board is connected. It is recommended to replace the pin protector or the IC connector protection socket after 100 attachments and detachments.

*3: For the recommended footprints pattern, please visit Tokyo Eletech Corporation's website.

- Contact the Toshiba sales representative for information about RoHS compliance before you purchase any components.

MCU Probe Spare Parts

Part Number	Target MCU Package	Spare Part			
		QFP Adaptor *1		Pin Protector *2	
		Toshiba *3	Tokyo Eletech (IC Connector)	Toshiba	Tokyo Eletech (IC Connector Protection Socket)
PN120004	QFP80 (14 x 20)	PN210001	TQPACK080RA	PN210003	TQSOCKET080RAG
